Student Health Center Pharmacy Expected to Reopen this Week

By Jennifer Bryant

The Student Health Center pharmacy is expected to reopen this week, six months after it closed due to a fire that ripped through the building formerly known as the Human Ecology Building.

Melinda Garrett, director of the Campus Health Center, explained in the weeks after the fire that D.C. government officials told her "we'll play by the rules" to reopen the pharmacy, in order for the pharmacy to be reopened.

"All the machinery that was destroyed had to be reordered and replaced," Garrett said. "The Middle School also needs water and smoke damage to the wiring, motion detectors and security system in the pharmacy."

The Student Health Center pharmacy is located in the Human Ecology Building.

Rain Doesn't Stop Flashy, Ooh La La

By Christina M. Wright

Randy Mason's rain and pools did not deter about 50 girls from attending the first day of the selection process for next year's Ooh La La and Flashy Flaps squads.

"I was little disappointed by the turnout today," Kristyn Oliver, captain of Ooh La La, said of the approximate 50 girls that formed her squad. "But it happens like this every year. As the week progresses, girls will show up more." Flashy Flap Coordinator Lauren White led the clinic participants in learning the three types of marching styles: the standard march, the step-on-step march and the kitty-step march. The marchers were very satisfied with the first day of trials.

"So far, most people are happy with the first day of the selection process," Mason said. "But it happened like this every year. As the week progresses, girls will show up more."

The flag clinics will continue for the remainder of the week, and the final trials will be on Monday, April 4. The girls will be required to perform the three marches, flag routines and stunts that will be "acted out" this week. They will also be required to make up a flag routine for consideration.

There will be three judging panels. Initially these judges are the three band directors; however, there are only two band directors at this time, so the third judge will be decided at a later date. Band director John Newsom said he is looking for one thing only: for the flags to "look as one," he said.

"The flag squad should look as one," he said. "Neither the flag, the drum line, or the marching band should have different ideas."

"Look at our standard march. It's supposed to be causing major damage in downtown areas affected by the earthquake. It's not a duplicate. It's a sunami will follow in the south, a couple kilometers further south. It occurred a little bit further south, a couple kilometers further south. But that's the same type of earthquake."

"But there are structures, officials said no evidence is available to suggest that tsunamis will follow yesterday's quake. We have not heard of any tsunami hitting anywhere."

"...and suddenly the room started shaking," Indonesian resident John Newsom said in an interview with CNN. "It's not a duplicate. It's a sunami similar to the one last year that ripped through parts of Asia and killed at least 250,000 people."

"You're moving males and females into different buildings. "There is no power," a policeman told foxnews. "Aftershocks keep running out."..."

"In the weeks after the fire, the police attempted to pull children from the collapsed building. They found hundreds of people, including some women clutching babies and children in their arms, running out of higher floors. Women jumped out of fear of another earthquake that would lead to another devastating tsunami."

"The cause of the October blaze still remains unknown. Two fires were set the same day and both were in the same area."

"Al the medicine that was destroyed is expected to generate a widely hazardous tsunami in the ocean near the earthquake," Blake said. "Authorities in those regions should be aware of this possibility and take immediate action."

"It occurred a little bit further south, a couple kilometers further south. But that's the same type of earthquake."

Jackson Judge Allows

Preceding Allegations

BY KEVIN HARIS

The judge for the Michael Jackson child molestation trial agreed Monday to allow prosecution to use evidence from a previous molestation allegation, including the infamous 1993 one in which Jackson reached a multimillion-dollar settlement with his accuser. 

Judge Rodney S. Melville said jurors could hear evidence from five separate incidents, in which prosecution says Jackson either "molested" or "groomed" young boys for molestation.

"Testimony," he explained, from a just-promoted Michael Jackson recorded in 1993. No changes were even filed, as that came before settlement worth $43.5 million was reached in 1994, the year for which the trial is to begin. Also excluded two other boys from the prosecution's case "to look for bad and its going to get worse. "

"Great day for the D.A "

is taking place. "... The stakes have gone way up for Jim Hanmer said during a broadcast outside the Jackson reached a multimillion dollar settlement

The six pageant categories included group presentations, personal introductions, personal introductions and question and answer. "

The event is under a special management plan that allows{|!|}|!|}" the day I'm still a human being so it does hurt it's very, very painful. "

Jackson said he uses prayer to help him cope with the trial. "I gain strength from God. I believe in the Lord, I believe in Him and I believe in Michael Jackson. "They are totally fabricated. It's very sad; it's very hurtful," Jackson said.

"I'm a strong person. I'm a warrior and I know what's inside of me. I'm a fighter ... but at the end of the day I'm still a human being as is Amo in the way very, very much."
School Offers Hands on Learning

SCHOOL, from Campus A1

of color, they fall even further back," Maqubela said that to begin training students for top-minded careers and for college, or even in high school, is too late. The frustra-
tion for critical science and math skills must be cultivated early on.

Acting as a bridge between the nurturing environment of elementary schools and the fast paced college preparatory environment of high schools, middle school is a, crucial time of learning and developing, says that School of Math and Science administratores they want to take advantage of.

Karen Barnes, chief aca-
demic officer for the middle school, described the school's curriculum, which she said is intended to produce future doctors, lawyers, engineers, math, language arts, sci-
encies, math, language arts, sci-

"We are designing our courses to be intensive," Shela Pla, chief operating officer for the middle school, said. In the middle school, stu-
dents will be able to learn about abstract ideas in the classroom and then practice in applications of math and science.

"We can have an involve-
ment of biology faculty where [students] immerse only look at the body, but living systems," Pla said.

Also students will have the opportu-
ity to learn about business, na-
omedicine and aerospace from Howard professors during the extended day activities. In addition, in students learn Spanish, they will have opportunities with Spanish speaking school children in different parts of the world. Being associated with Howard will afford the middle school many of these opportunities.

"A lot of the things we're able to have is just talk-
ing about what we're doing or what we have here as a university," Maqubela said. Located in what was previously the Human Ecology Building, the middle school will be poised directly beside the School of Education and is in close prox-
imity of Founder's Library and the major science depart-
ments.

"While the school will enjoy a close relationship with the university, it is legally a public charter school in the District of Columbia and therefore must adhere to over-
tight standards," Pla said.

The two main restrictions are that students entering the school must be in their valid grade and must be a D.C. resid-
ent. The school is financially supported by D.C. taxes, in addition to income grants toward providing for the middle school and private contributions.

"Ultimately Pla, Maqubela and Barnes, who are all work-
ting together on the middle school project, have high hopes for the future (the school). Eventually the school should go up to the eighth grade and house students from first to 12th grade," Garrett said.

"With smaller class sizes, hands on learning and teaching individuated to each student's needs, the school's organizers want to make a change in teaching in the U.S."

"The real vision is to revolutionize the way we teach our children, so its design and the fundamental goal is to remove the stress of the student," Maqubela said.

Try-Outs Continue in the Rain

RAIN, from Campus A1

There were about 25 cuts made on the first day. But, two girls walked out on their own.

"I think there is a miscon-
ception about squad," Oliver said. "People just think all we do is swim and pope, but it's a lot more to it. It's a different type of dancing. Tryouts give them the reality of what the real squad is."

"The real squad is.

"We are looking for en-
giec, poetic and not necessar-
ly technically efficient, but some type of dance experi-
cence," Reid said. "We're look-
ing for girls who can look and act like ladies. And we're looking for girls who are fun, so, to you, it looks like they are having as much fun per-

Metro Passengers May Find Themselves Standing in 2006

BY STACY A. ANDERSON
Contributing Writer

Howard students who frequently ride the Metrorail may find themselves standing more often to get to their final destination, starting as early as the end of this year.

The Washington Metropolitan Area Transit Authority (WMATA) has proposed a new plan that would remove up to eight seats in each train car and add handrails to allow more standing space for commuters. The beginning stages of the plan have been approved and are already in effect.

As a part of phase one, cameras will be set up in 16 train cars, in approximately two six-car trains and four spares. "These cameras will collect data through video taping customer habits," D.C. Metro spokesman Steven Taub said. Cameras will monitor customer movement for three months, starting in June.

"What we're trying to test is ways to improve passenger flow. The bottom line is there is a very difficult set up right now," Taub said.

Regular Metro riders are very smart and know which car to be in, which door to get off at, and which is closest to the elevator. So they have a tendency to stand by doors and will not budge even after we make announcements," Taub said. He believes this proposal would alleviate that problem.

"Train cars currently seat 65 people and, when standing space is included, hold an average of 182 passengers. If 24 seats are removed from each train, an additional 12 people can stand," Taub said. "Do members of the community think this is a good idea? "Well comfort-wise, I would say no. Efficiency wise, definitely," David Johnson said. "At least three extra people could fit on the train. It's probably good. More [hand] railings would be better.

"Other people in the city are more skeptical of the proposal. "I think this is a good idea. "Well comfort-wise, I would say no. Efficiency wise, definitely," David Johnson said. "At least three extra people could fit on the train. It's probably good. More [hand] railings would be better."

Others in the city are more skeptical of the proposal. "I don't think it will work. "Obviously there are people who sit down that don't really need to. Some travel a really far way to have to stand," Amanda Foster said. Foster takes the train from the Courthouse Metro to downtown D.C. every day. "It's never a smooth ride. People practically fall over when they have something to hold. It's matter of safety every day," she said.

"I think the system is great as it is, but it's impossible to do anything to improve it," An1elia Hall, a student at George Washington University, said. "It's not a fair system and the buses are terrible."

If the board approves phase two, Metro will remove seats by the end of the year or early 2006.

Metro is also considering other ways to accommodate customers. "Better chairs are being designed but haven't yet been presented to the board," Taub said. He said they have discussed using stickers or markers on platforms to indicate where riders should stand or how to get on the train to get to their destination more efficiently.

Washington residents can look forward to riding trains that look more like this in the future.
Jumpstart Changing Lives

SERVICE, from Campus A2

Adams said.

The Jumpstart D.C. - Howard University chapter was created in 2001 and partners with Bruce Monroe Elementary, Seaton Elementary, and the Howard University Early Learning Program (HUELP). The students have the benefit of working one-on-one with 40 Corps members for the 2004-2005 school year.

"It was a great opportunity for Corps members to interact with the kids. The children had fun and the teachers had a great experience too," Joseph Bates, a 2003-2004 Corps member and current early learning program student assistant, said.

Both Adams, Bates, other Corps members and volunteers will have the chance to further the Jumpstart class instruction through "Jumpstart For A Day" (JFAD), an educational learning fair for 300 of Jumpstart DC-Howard University's program partner school students. Jumpstart For A Day will be held on April 15, 2005 from 9 a.m. to 11:30 a.m. in The Valley at Howard. Participating children will interact with Corps members, parents and volunteers through activity-based learning stations that revolve around literacy, alpha, numeric and color associations.

While the event is closed to the general public, Jumpstart organizers encourage Howard University students to volunteer for the event. Interested persons should attend the volunteer orientation meeting for "Jumpstart For A Day" on Wednesday, March 30, 2005 from 7-8 p.m. at the Human Ecology Auditorium.

**All Students Are Welcome**
**ATTENTION**

A new regulation is being enforced to maintain the climate of fear and prevent students from using pay phones. This relates to an article that starts with the quote: "We were right. We had no business with one. You frowned and didn’t understand, but your parents were happy.

We see the parallel when diminished and middle kids are walking around with phones newer than ours. We ask, "Who are they talking to?" We recognize that the climate of fear and the modern era screams different than when we were running around in the box. Having a cell phone is important for emergencies and safety reasons. We support this as a reason to give a younger a phone. When we had an emergency we ran down the street to a neighbor or we walked and that system seemed to work fine. We called our home phones to communicate and afforded pay phones. When we paid children on these phones, they aren’t phoning home to check in. Instead they are talking longer and earning money like we did.

We think it’s key to have a cell phone once they start driving, but before then it’s just not necessary. The young ones need to grab a walkie-talkie and pretend like we used to.

Another important thing to consider is the way that cell phone providers rip people off. They are successful with running up into being things with hidden fees and plans that escape reality. How can we expect young adults to be accountable and responsible with their money when they are still petty immature? Phone companies aren’t just making profit off of a cell phone; they are hitting the young ones with the same fees. How can we never managers advertise for family plans and make it affordable to add a family member to the existing plan. We have to revert to the time, take the proper steps and ride with our parents. Kids are not ready for cell phones and they do not need them.

**What’s up with the Bathrooms in UGL Library?**

**Bryan L. White**

Something needs to be done about the bathrooms in the Undergraduate Library. If it makes its course to me to keep a bathroom when the toilet leaks water every time you flush it and as one has yet dubbed a "DO NOT USE" or "OUT OF ORDER" sign on the facility. Specifically, I am referencing the restroom in the second floor, which has been in this condition for a good two years now.

In this same bathroom, graffiti Illustrations have been drawn in the stalls. The vandalism has been on the wall since my freshman year and I am a rising junior in someone paying attention in UGL.

And to the immature bunch who draw the pictures— if they haven’t graduated yet, just what are you doing with your life? Could someone please paint over the vandalism in the OGL, before I have to growl because I’m tired of seeing it there? Please don’t paint stupid images from any nation and free, administratum, I’m in college. The main stream in those nations is clearly out of order.

**Young Talking Tyke Mess**

We remember begging our parents for a pager back in the 90s. Suddenly every middle-schooler was getting Motorola pages and being cooled by paging someone else or vice versa. People played pranks on their intra and friend to friend fad by having a semi-groovy message. You felt out of the loop without having one, but your mom and dad insisted that if you weren’t a doctor or drug dealer, you had to have a business with one. You frowned and didn’t understand, but your parents were happy.

Our View:

These young talky tykes are out of control with their cell phones.

Gone Phishing: Newest Identity Theft Scam Concerns Students

BY TOBY N. HALL

The semester. "You've Got Mail," indicated to sophomores political science major Brandon Adams that the email he had received had come from an unfamiliar sender, and the subject was "Account Update!" He was sending an offer of a 

loss of information." As he moved his mouse to click the delete button, he asked himself, "Hey, don't I bank at FirstBank, I was banked with them.

Thomas was lucky. He was a potential victim. Th

ousands of Internet users have become victims of phishing. They are unknowingly giving their personal information to cybercriminals.

Phishing primarily thrives when a hacker cre

ates a fake website posing as a legitimate one, prompting Internet users for information. According to Ronald J. Louch, Ph.D., chair of Howard University's College of Engineering, Architecture and Computer Science, Internet users believe that they are getting more sophisticated.

"It's easy to steal a type off a company's website and not to send out one million e-mails or pop-ups to one million people," Louch said.

Adams Akofor, a first-year student and computer science graduate student, "realize the problem with phishing."

You can send millions of e-mails or pop-ups to millions of users and at least one will buy," Adleson said. "That is when they think that they will capitalize on the one person for over $1,000,000.

For Robert Washington, a sophomore television and film studies major, "the problem is that someone is stealing money from my bank account, and... they had one identity stolen by a woman in W

According to WordSpy.com., "It's avoidable if you know what to look out for."

One website, theWapEdge.com, provides the public with information on phishing and gives some tips on how avoid becoming a victim of a new scheme.

According to WordSpy.com., "If you receive an unsolicited e-mail saying your account is in danger or giving you some type of advice on what to do, do not reply or click any links in the email.

The website advises Internet users with other helpful internet tips. It also recommends personal or financial information, contact your bank or credit card company.

Companies that have been affected by the phishing scam are Washington Mutual Bank, eBay, PayPal, Citibank, Online Bank, Amazon.com, Verizon.

"No program is flawless, but I have no knowledge of the validity of this accusation," AOL technical support technician Robert Saunders, who has worked for the company for 15 years, said.

"If there was a full run on any other anti-virus or firewalls etc, there would be a similar problem. Unfortunately, in 15 years working in computers there hasn't been one full-blown virus outbreak.

As for Howard students at risk? Gery Hunter, lab staff assistant, said that there is a very small threat and hardly believes that students will be impacted.

"Because Howard's campus is protected by our anti-virus there is no need for students to worry," Hunter said. "Only if they are sole-users of certain services should they be concerned about how their students need to worry.

Jim Davenport, a junior print journalism major, believes that she could have suffered from phishing before.

"I was confused about the pop-ups that I had on the system when I had AOL," she said. "When I disabled access of the pop-ups, my computer system got very slow. When I did allow them to come through, I had problems with my computer."

I had to install an entirely new hard-drive on my computer.

However, not all AOL users share the same sentiments. Sophomore public relations major Bridges Guyard reported no trouble with virus- es on his system.

"I was using AOL on my computer here at Howard, I kept updating the software whenever they offered it and they had no problem," Gissard said. "I got a virus at first when I started using Internet Explorer.

"If I got a virus or an attack from a cybercriminal, what are the more recent game systems. However, the first home video game system was Nintendo, dating back to 1977. It featured games like Mario Bros. and Duck Hunt and Legends of Live." In 1980, the Nintendo Game Boy was released. The difference between the original Nintendo system and the Nintendo Game Boy was that Game Boy was a portable player that could be played in the house or while riding in the car.

Game Boy was an on-the-go type of gamer that was small enough to fit in women's purses and maybe some men's. However, the manufactures of those systems got away from the idea of portable players and began to make more stationary home systems.

Many Howard students who play video games grew up with the station ary systems said that they preferred the home systems to their portable systems. "I don't like the idea of a game system..." sophomore

PORTABLE GAME SYSTEMS BACK ON THE RISE

BY ROBIN ROYANTREE

Despite their current wave of popularity, portable game players haven't been as popular as home consol e systems, but manufacturers are trying to bring them back in the world of video gaming. The latest portable players are Sony's PlayStation Portable and the Nintendo DSi and the Sony PlayStation Portable.

According to Nintendo's website, the DSi has the DS screens that react to the gestures. This system has wireless capabilities that allow players to compete with one another. It also has PicoChat software, which allows users to draw, write messages and send files wirelessly. The system also has a microphone that leaves the player in total control of their dialogue or using commands.

PSP includes games, music, movies, communications and wireless networking. It has the abilities of a digital photo and full-motion video displays. It also comes out of the box with all of its games. It is 11.5 inches wide by 6 inches tall by 5 inches deep and weighs 2.9 pounds.

It is not out of the ordinary for many Howard students to be caught playing Grand Theft Auto or one of the Madden NFL games on their PlayStation or X-Box game systems. PlayStation and X-Box along with Game Cube and PlayStation II (PS2)

Lightweight Library Technology Leaves Student Leery

BY KAREN BRUNIDGE

Technology developers, are constantly making preparations for new and improved forms of computer technology. While some people see this as progress, others see it as a threat to the computer industry.

Cell phones are at the forefront of this race. With text messaging becoming commonplace, people are not even using technology to send an SMS text. Instead, they are using the
text messaging service that comes standard on their cell phones.

Japanese developers have now come up with software that could soon have students reading and studying their course materials right off of the screens of their phones. If this technology were to be implemented in the US, students could choose a specific genre, authors and topics to pick what they want to read. "I think it is important to author," said one student who sound good to some students. Other students, like Clarence Savanne, who is a senior major, are not sure if they would use this kind of technology in a mobile library system.

"The idea is good, but I don't think I would want to be
texting in class and checking it out in the middle of the

When you turn your phone on, you are able to take a picture of the barcode and it comes up with all of the information. The whole process is quick and easy.

Other students agree with company representatives, who claim it is a "good idea, but it would make me study more."

I don't know if people will use it."

"I know that people will use it," sociology professor in English and English major, Natalie Price said. "I don't think I would use it, I would be looking at my phone all the time."

There is always something on the phone that will take up your attention. Other students agree with company representatives, who claim it is a "good idea, but it would make me study more."

Students and professors both agree that this technology is a good idea, but it would make them study more. It is a good idea, but I don't think I would want to be texting in class and checking it out in the middle of the class. It would make it hard for me to study.

"I don't know if people will use it."

"I know that people will use it."

The Madness Continues

BY ALFONS PRINCE
Contributing Writer

It was a historical weekend in college basketball.

There were four games two NCAA regional finals that were played this weekend. They were four overtime games. One in the Midwest, one in the Southeast, one in the West, and one in the East. But something was missing. There was no excitement, no drama, no thrill. It was a historical weekend, one that will be remembered for its lack of passion. It was a weekend that lacked the excitement of the past. It was a weekend that had no heart.

The Midwest Regional Final was played between Louisville and West Virginia. That was followed by the game between Illinois and Arizona. Saturday's game featured North Carolina against Wisconsin and Michigan State against Kentucky. These games gave no indication of the excitement that the tournament was going to bring.

Louisville was seeded higher than West Virginia and made it to the Elite Eight. They get to the regional final. They are going to play in search of a national championship. They are going to play in search of a national title. It was a historical week.

The first game was played between Virginia and Kentucky. These two teams made it to the Elite Eight. They played in college basketball.

Louisville, who came in with a chip on their shoulders after being seeded fourth, defeated Louisiana-Lafayette in the first game with their 88-82 victory over Wisconsin. The Tar Heels will be making their first Final Four appearance since 2000. With their 88-82 victory over Wisconsin, the Tar Heels will be making their first Final Four appearance since 2000.

With their 88-82 victory over Wisconsin, the Tar Heels will be making their first Final Four appearance since 2000. After causing a few critical turnovers, they tied the game at 80. Arizona had a bank shot from an awkward angle in front of the basket. One of those shots was enough drama to last a lifetime. It was a historical week.

It was a historical week. It will continue to play in search of a national championship. It will continue to play in search of a national title. It will be a historical week.

Los Angeles Lakers Showing Signs of Frustration

BY COURTNEY DI LAN D

As the Los Angeles Lakers season could not get any worse, owner Jerry Buss had to do something about it. They were the Los Angeles Lakers, and they were a team that was known for its greatness. But they were also a team that was known for its frustration.

Atkins remarks came after a report that the Lakers were going to fire Rick Pitino. That was followed by the game between Illinois and Arizona. Saturday's game featured North Carolina against Wisconsin and Michigan State against Kentucky. These games gave no indication of the excitement that the tournament was going to bring.

Atkins was named the head coach of the Lakers in 2004. He was known for his aggressive style of play and his ability to motivate his players. But Atkins was also known for his lack of success. The Lakers have not made the playoffs since Atkins was hired. Atkins was not a popular choice as the head coach of the Lakers. But Atkins was a popular choice as the head coach of the Lakers.
