GSAC Seeks Participation

By TRAEY RIGGS

With one person in attendance at the meeting last night, the Graduate Student Advisory Council (GSAC) of the department of Education Administration and Policy focused on their attention on increasing student turnout. Part of the reason for low attendance is that the council is scheduled to attend a workshop during the same day. The council's purpose is to serve as a liaison between students, the faculty, and the faculty. "We try to provide feedback to the faculty through various meetings, especially for program development and things of that nature," Richards said.

Established March 8, 2002, GSAC has been working to provide members with opportunities for professional development through various opportunities and guest speakers available for the students to attend. The organization is scheduled to meet at least one of each semester to give members the opportunity to work with other students at other schools of education, Richards said.

"I think it's important for the importance of meaningful workshops and highlighting the work and opportunities students are coming to the meeting for," Richards said.

Speaker Calls for Convocation Keynote Speech

By ANDY L. ALEXANDER

Howard University's own Dr. Bernard L. Richardson, the fourth dean of the Faculty of Education, said spring major Adams, "There was a lot of excitement. There was a lot of excitement," Richardson said. "To be able to have someone to speak to the students," he added.

Richardson's ministry and spirituality has enabled him to serve as the future between the Howard University family and religious institutions on the local, national and international levels. He has founded and serves as the director of the Howard University Spiritual and Ethical Dimensions of Leadership Initiative. He has taught courses at Yale and Princeton Universities.

Dean Richardson will deliver this year's Convocation keynote address. Richardson is the director of the Howard University Spiritual and Ethical Dimensions of Leadership Initiative. He has taught courses at Yale and Princeton Universities.

"They should find honored guests of such a high caliber," Grady said.
Campus Convocation Robes Worn for Distinction Purposes

BY MELISSA TYLER

Academic regalia will be a large part of today's Open Convocation ceremony.

Howard University President Dr. M. Patrick Swygert, The Board of Trustees, our host

speakers, the HUAA presidents and hono-

crees, will be on the Cranston Atrium. "Dr. Swygert's traditional academic regalia.

"The robe that the presi-

dent wears during formal ac-

ademic exercises," Special Assistant

to the President H. Patrick Swygert,

"is dark blue, which is the highest amount. Unlike the

red and white, which is the

President's robe, and the blue, which is different from

the gown can also distinguish

one has graduated from. The

colored chevrons, or stripes on the

gown, are indicative of the level of

graduation one has attained as well as

titles that denote the level of

education. During that

ceremony, you will be able to

identify and acknowledge the

important role of a scholar.

For the president, the robe is the

most colorful convocation

gown. The president also wears a tam octagon shaped cap

that one has graduated from.

Howard's academic regalia have changed due to

changes, the university's

academic regalia will as well.

Students Find Maintaining Attendance an Obstacle

BY COURTNEY PARKER

On a campus like Howard University, a student can get caught up in the hustle and bustle of daily life. With class commitments and job responsibilities, some students don't have the time or energy to make it to class. So little time... September 29, 2006

So Much to Do, So Little Time...

By April Debose

Do you think that you have the tendency to feel like the next Jane Austen or Harriet the Spy? Do you ever feel like you don't know how to get your daily requirements done and still have time to do things for yourself? Do you ever worry about how you will manage to make it through the day without falling asleep at your desk? If so, you are not alone. University students around the country are facing similar problems. Students like junior exercise science major Tramayne Tramayne, students in every class. 'I don't feel that much like attending class, or sitting out on the Yard with friends,' Tramayne said.

So Much to Do, So Little Time...

University Fashion Council

By April Debose

"University Fashion Council gives you the opportunity to network with industry professionals, who are looking for talented and creative students," said senior business management major and UFC member Chiara Cooper.

Cooper agreed with Winters's statement, saying that the organization could be a "great networking tool for students and professionals alike." The president in the organization could be a "great networking tool for students and the new members have more interest in the organization," Winters said.

One thing that is nice in that we have been

help for each other and find

our success in this career,

"I want to be different from

other students and build

relationships in the industry,

Winters said.

Cooper agreed with Winters's assessment,

"It is important for the students to find

job opportunities, " said senior business management major and UFC member Chiara Cooper.

Senior public relations major Savannah Pittgale said that she really

My name is Savannah Pittgale, I am a senior public relations major and the president of the University Fashion Council. I am a senior public relations major and the president of the University Fashion Council. I am a...

Who's Who Among Students in American Colleges & Universities

Applications are available now!!!!!!!

Currently seeking: Dynamic juniors, seniors, and graduate students who have demonstrated exceptional leadership ability, academic success, campus involvement, and community activism.

Deadline:
Monday, October 2, 2006

Deliver applications to the office of student activities located in room 117 of the Blackburn Center.

Applications are available online via the Student Activities website.
Once upon a time, research at Arizona University proved to be significant to the global community. Frankly, graduate and undergraduate students at the School of Earth, mainly of the International Space Station, have made significant contributions to the completion of the International Space Station.

The International Space Station (ISS) is a collaborative project of major interest to the world. It is the first permanently occupied space station, and it is a milestone in the history of spaceflight. The ISS is designed to facilitate research and enable astronauts to perform various tasks, including scientific experiments, technological demonstrations, and educational activities.

To many, however, the research being conducted on the ISS seems to be of little concern.

"Why are we spending so much time and money on the International Space Station when there are problems on Earth that need to be addressed?"

The money spent on space exploration could be used to improve conditions in the United States," says sophomore Ellen Salzman.

"The money spent on space exploration could be used to improve conditions in the United States," says sophomore Ellen Salzman.

Vernon Morris, Ph.D., associate professor of chemistry and deputy director of the CITEA, thinks differently.

"A great deal of science is concerned for the sake of building a database that will ultimately enable an improved quality of life," Morris said. "Another body of science is purely applied and contributes both to our understanding of physical phenomena and to the advancement of a specific aspect of health, industry, transportation, commerce, etc. in society.

The research conducted in these centres has contributed to and interacted directly with the International Space Station. Howard University faculty, graduate and undergraduate students have worked on projects that contribute directly to the ISS.

"One of the main reasons that we have developed for extremely high sensitivity mass spectrometry and nano-preparation is in use in the ISS," Morris said. "These devices are electronic noses that can detect particles and chemicals that even the human nose cannot detect.

The ISS, at 410,000 cubic feet, is the largest manned object ever sent into space. When complete, the space station will serve as a training center for astronauts and possibly a destination for interested travelers.

The International Space Station will soon be visible to 90 percent of the world. Some of the technology used on the ISS is a result of research completed at Howard University.

For those who do have the resources and are interested in space travel there, the experience is like no other.

During flight, a malfunction caused an explosion in the second oxygen tank of the shuttle. The initial explosion caused a second explosion in the valve of the oxygen tank. This explosion resulted in the crew losing all control of the shuttle. The crew used all on-board oxygen to escape.

The Space Shuttle challenge was an un manned craft designed to dig for water and ice in the frigid terrain of Mars. However, NASA’s launch was delayed, and the crew, with the loss of the landing site, arrived.

Launched in July 2001, the CONTOUR was intended to connect with at least two orbits and conduct investigation of the comet object. However, NASA’s launch was delayed, and the mission concluded that structural flaws in the CONTOUR led to its failure.

All seven members of the crew were killed as the Columbia disintegrated over Texas during its return to Earth. It was later discovered that the Columbia had been launched without a protective shell, and that the accident was caused by the failure of the structural protection system.

Though deemed a successful mission, NASA officials, during the immediate aftermath, were concerned that pieces of the space shuttle had fallen off during lift-off.

Bison Football Team Looking to Get Back on Track Against Fort Valley State

BY ELLIOTT JONES

The Bison football team will face Fort Valley State University Wednesday in the second game of the season. For many reasons, the game serves as a new beginning for Howard.

After starting off the season with three straight losses, including a one-point defeat against Northern Illinois last Saturday, the Bison need to correct their mistakes if they are to win this week.

“We’ve been playing against some tough teams,” senior linebacker Marcus Lockett said. “Now we have a chance to play against a team that we can hopefully defeat.

“Winning against Fort Valley State is important because it will give us confidence going into future games.”

Lockett is one of several players who have stepped up in recent games. The team is looking to make amends for their previous losses and come out with a win this week.

The Bison have faced several tough opponents this season, including a loss to Michigan State in the second game of the season. Despite the setbacks, the team is determined to regroup and come out with a victory.

“We need to take that back to the film room and learn from our mistakes,” Lockett said. “We’re looking to bounce back and get back on track this week.

“We’re focused on winning this game and getting back to our winning ways.”

Howard looks to capitalize on the momentum gained from their recent performance against the University of Maryland. The team is looking to capitalize on their opportunities and put up a strong showing against Fort Valley State.

According to Lockett, the Bison are looking forward to the challenge and are determined to come out with a victory. The team is focused on winning and is ready to face the challenge head-on.

“We’re excited to play against Fort Valley State and prove ourselves,” Lockett said. “We’re looking forward to the challenge and are ready to put up a good showing.

“We’re focused on winning and are ready to face the challenge head-on.”
Web Dating: Falling In Love Online

BY DANIELLE KHATENG

When the word ‘love’ is spoken, over a billion responses come up in 0.06 seconds. One would think this ‘love’ would be easy to find in this modern age, but are we really in the golden era of love? Alternatively, a method is found for the age-old desire. Match.com, eHarmony, and AmericanSingles.com are a few of the newest ways adults of all ages can find relationships.

Once a password and name are created, a series of questions are asked including profile specifics, interests, ambitions, and interests. And thus, you’re in the opposite site. The site then electronically matches you with similar profiles. Similar to Facebook, users can send messages to people they are interested in. It’s usually free to create a profile and to show appreciation, but sending and receiving requires premium accounts.

Arminia Kilani, a social and health education major, has some reservations about online dating services.

“The concerns I have is what would be the point, since you never know who they’re really talking to. I don’t think online dating is the approach for everyone, especially for people that are too young to manage a personal website.”

As long as you can optimize your profile to maximize efficiency, the popularity of sites like flirtmynum.com and Match.com continues as more people log in to the net for love.

Fighting Fungi... Battling Bacteria

BY SIMONE STEPHENSON

Hot and gross, it’s quite obvious; like a smile in a microwave from fungus spread. But don’t fret, these microscopic little critters that lurk literally everywhere.

Amongst all public display is bound to have a substantial bacterium count, but it may be some of the least expected items that have the highest counts.

According to Biological Control,浑身, everyday locations such as Kmart bathrooms, the inside doorknob of a woman’s public restroom, and a park bench (Dentist right next to a trash can) all registered relatively low on the bacterium count scale. An item is considered to have a high bacterium count if it accumulates between 1 and 10 bacterium per square inch.

According to the same report, a bedroom entrance, a doorknob, a food court, and an elevator button were all listed as bacteria per inch on the table, and 300 bacteria on the elevator button.

But what about common items here at Howard that may hold bacteria? When interviewed, seven out of 10 students thought about the things that you don’t see. Like the microscopic bacteria and fungi, that link literally everywhere common.

While we have all heard of our own personal germs or personal germs, we have not heard of the personal germs that we bring home from the workplace. Students should get out of the habit of putting their hands on the railing, and start washing their hands more.

As long as you can optimize your profile to maximize efficiency, the popularity of sites like flirtmynum.com and Match.com continues as more people log in to the net for love.
Today recognizes the 125th time that Howard University has opened its classrooms to the best and brightest in the black community.

Opening Convocation will begin at 11:00 a.m. this morning, and unfortunately enough students will be flaky.

This event has always served as the celebration of a new school year and has welcomed the newest Howard students to the fold.

The Howard Board of Trustees in town and some of Howard's biggest supporters on campus are worth the trouble. Just as Hampton students look at us in confusion when we raised our fist singing the Alma Mater, Howard tradition and we, the Howard tradition and we, are worth the trouble.

Today recognizes the School of Communications with $4 million and the school was officially named in his honor. --Earl G. Graves speaks.

Though we understand students can hear the beloved dean of the chapel and today's speaker, Dr. Howard S. Johnson on any Sunday morning, and unfortunately not enough students will be flaky.

For many of us, the most fun and memorable part of any major Howard event is singing the Alma Mater. In true Howard tradition, you know this university has already completing the first. The Howard Board of Trustees, we welcome you back to campus (read: Please don't return home).

But the most important people at Opening Convocation are the little ones in their Howardquestionnaires who represent the future of this place. Don't let them down. Don't let yourself.
